

**Due Date: 16 December 2010**

1. Page 525. Exercise 6 and 7. Combine both exercises into a single **Ledger** class. Write a driver class (contains the main method) to test the **Ledger** class. The driver class performs all the input and output operations. The **Ledger** does not contain any input or output operations.
2. Page 525. Exercise 12. Write the **Polynomial** class. Write a driver class to test the **Polynomial** class. The driver class performs all the input and output operations. The **Polynomial** class does not contain any input or output operations.

**Hand in a source code listing ( print out of your Java source files) and the output produced by your program.**
